Annual Report, 2010-2011

Job II-A: Kill Studies of Deer on Alabama Wildlife Management Areas

Study Leader: Christopher W. Cook

Objective: To measure, record, and evaluate the deer harvest on Alabama Wildlife Management Areas.

Procedures: Project personnel recorded hunter participation and success on each of the 33 wildlife management areas (WMAs) and 17 physically disabled hunting areas (PDHAs) having deer hunting during the 2010-11 season. For reporting purposes, Black Warrior – Zone A, Black Warrior – Zone B, Upper Delta – Zone A, and Upper Delta – Zone B are considered separate WMAs. The Jackson County Waterfowl Areas are considered a single WMA, as are Swan Creek & Mallard-Fox Creek WMAs and W. L. Holland & Mobile-Tensaw Delta WMAs. Deer were examined and records were made of their sex, age, weight, and antler development when possible. Portions of this information were compiled and computed by project cooperators and submitted to the project leader for further analysis.

Discussion:

Hunter Participation and Success:

The number of deer killed on each WMA, the hunting method, and the man-days of participation are compared in Table I. The figures in Tables I through X are considered estimates since season permits are issued on many of the areas. Hunter participation and success can vary due to weather, date of hunt, and length of the season. To better understand overall trends, Table II and Tables V through VIII compare this past season's participation and success with an average of prior years, as well as last year, only for the WMAs offering deer hunting during the 2010-11 hunting season.

Participation in stalk hunts on the WMAs that offered stalk hunts during the 2010-11 hunting season was nearly equal to last year's total. Sixteen of the 28 WMAs offering stalk hunts during

the 2009-10 hunting season had increases in hunter man-days for stalk hunts during the 2010-11 hunting season. Average man-days hunted per deer killed decreased from 17.3 in 2009-10 to 16.9 in 2010-11. This success rate still was only slightly below the average of 16.8 man-days per deer killed for the period of 2004-09 on these same WMAs (Table II).

Twenty WMAs scheduled either-sex deer hunts for youth hunters during the 2010-11 hunting season. Each hunter participating on one of these special hunts had to be less than 16 years of age and had to be accompanied by a non-hunting, licensed adult 25 years of age or older, or a parent. Total participation on these hunts increased from last year's total of 744 youth hunters to 1,037 youth hunters for 2010-11. The number of deer killed on these hunts also increased from 74 in 2009-10 to 135 for 2010-11. These totals (hunters and deer killed) are included in the stalk hunt totals in the following tables. The numbers also are shown in Table III. The primary cause of the increased participation and deer kill was no hunts on the Fred T. Stimpson area had to be cancelled due to high river levels. The primary purpose of the youth hunts is to acquaint young hunters with deer hunting. These hunts will continue on WMAs where there is sufficient interest.

Twenty-three WMAs offered a total of 242 days of either-sex gun deer hunts (Table IV). Two hundred thirty-eight days of the 242 days of hunter's choice hunts were stalk hunt days. The remaining four days were dog hunt days. All of the either-sex gun hunts for the 2010-11 hunting season offered 100% either-sex opportunities. The chance to kill antlerless deer on the either-sex hunts greatly influences the hunter participation, number of deer killed, and hunter success levels shown in the stalk hunt totals (Tables I and II). Participation in either-sex stalk hunts was 70% of the total stalk hunt hunting effort and represented 75% of the total stalk hunt deer kill. The four days of either-sex dog hunts were 29% of the total dog hunt hunting effort and represented 46% of the total dog hunt deer kill. The hunter success rate for either-sex stalk hunts was one deer per 15.4 man-days of hunter effort, which was much higher than the success rate for the bucks only stalk hunts (one deer per 20.5 man-days of effort). The hunter success rate for either-sex dog hunts was one deer per 10.0 man-days of hunter effort, which also was much higher than the success rate for the bucks only dog hunts (one deer per 20.6 man-days of effort). Fifty-three percent of the deer killed on the hunter's choice hunts were antlerless deer.

Participation in managed dog hunts decreased from the 2009-10 totals (Table V). Hunter success was much higher this year, going from 20.0 man-days of hunting per deer killed in 2009-10 to 15.7 man-days per deer killed in 2010-11. Hunter success was higher than the 2004-09 average of 22.7 man-days per deer killed. Dog hunting participation was 7.0% of the total deer hunting effort on WMAs during the 2010-11 season and accounted for 7.0% of the total deer kill.

Archery hunting participation decreased in 2010-11, declining by over 1,500 man-days from the 2009-10 hunting season totals (Table VI). This was in spite of the addition of two new areas that were open to archery hunting in 2010-11 (i.e., Grand Bay Savanna and Yates Lake West CHAs). Hunter success improved, going from 16.7 man-days per deer killed during the 2009-10 hunting season to 14.3 man-days per deer killed during the 2010-11 season (Table VI). The success rate for 2010-11 was higher than the 2004-09 average of 17.6 man-days per deer killed. Archery hunting continues to provide a large portion of the deer hunting recreation on WMAs, representing 25.3% of the total deer hunting effort and 27.6% of the total deer kill.

Participation in primitive weapons (PW) hunts on the nineteen WMAs offering PW hunts during the 2009-10 and 2010-11 seasons decreased from 3,980 man-days of hunting to 3,541 man-days of hunting. The success rate on PW hunts improved, going from 10.1 man-days per deer killed during the 2009-10 season to 9.9 man-days per deer killed for 2010-11 (Table VII). Participation on PW hunts represented 4.5% of the total deer hunting effort and 7.2% of the total deer killed on WMAs during the 2010-11 season.

The total hunting effort on the WMAs offering deer hunting during the 2010-11 seasons, as shown in Table VIII, dropped by 2.5% (i.e., 1,915 man-days) when compared to totals from the 2009-10 hunting season. This included the hunting effort on the two new CHAs. This year's hunting effort was over 5,600 man-days below the average of the previous five years (2004-05 through 2008-09) for these same WMAs. This year's hunter success ratio of one deer killed per 15.6 man-days of effort for all deer hunts was higher than last year's (16.7 man-days per deer killed) and the average for the previous five seasons (17.2 man-days per deer killed) on these WMAs.

Hunting Pressure and Kill Per Square Mile:

Total man-days of deer hunting per square mile, as shown in Table IX, was highest on St. Clair, Little River, Lowndes, Riverton, Grand Bay Savanna, Geneva State Forest, David K. Nelson, Scotch, Barbour, and Blue Spring WMAs, respectively. Total man-days of hunting per square mile was lowest on Seven-Mile Island (archery only), Yates Lake West, Choccolocco, Black Warrior – Zone A, Fred T. Stimpson (youth only), Swan Creek & Mallard-Fox Creek (archery only), W. L. Holland & Mobile-Tensaw Delta, Upper Delta – Zone B, the Jackson County Waterfowl Areas (archery only), and Black Warrior – Zone B WMAs, respectively. Stalk hunting made up the largest portion of total use per square mile on most areas (25 of 33). Archery hunts made up the largest portion of use per square mile on the Jackson County Waterfowl Areas (archery only), Seven-Mile Island (archery only), Swan Creek & Mallard-Fox Creek (archery only), and Upper Delta – Zone A (tied with dog hunts) WMAs. Dog hunts made up the largest portion of use on Blue Spring, Frank W. & Rob M. Boykin, Scotch, Upper Delta – Zone A (tied with archery hunts), and Upper Delta – Zone B WMAs.

Most areas of Alabama can support a balanced deer kill (bucks and does) of ten or more deer per square mile annually, depending on habitat quality. Only three WMAs achieved this level during the 2010-11 hunting season, mainly because of the limited amount of hunting pressure on most WMAs (Table X). St. Clair WMA had the highest estimated number of deer killed per square mile (22.52), followed by Lowndes (10.98), and Barbour (10.62) WMAs. W. L. Holland & Mobile-Tensaw Delta WMAs had the lowest estimated number of deer killed per square mile (0.56), followed by Upper Delta – Zone B (0.94), the Jackson County Waterfowl Areas (1.42), Black Warrior – Zone A (1.51), Black Warrior – Zone B (1.63), Swan Creek & Mallard-Fox Creek (1.81), and Yates Lake West (1.82) WMAs.

Weights and Condition of Deer:

Average weights of deer within specific age classes are one of the best indicators of overall herd condition (Table XI). An average live weight under 95 pounds for 1-½ year old males (i.e., yearlings) can be an indicator of poor physical condition caused by insufficient nutrition, either from poor habitat, heavy competition for food from other deer, or both. Where the yearling

males have an average body weight of 95 to 105 pounds on areas with good soils, there should be concern the deer population exceeds the capacity of the land to support the herd in good condition. The deer population should be reduced to a more healthy level in any situation where competition for food is the cause of low body weights in deer. Areas in Alabama with yearling males averaging above 110 pounds live weight usually are not carrying an excess of deer and efforts should be made to keep those populations at current levels. Average yearling male body weights among all WMAs averaged 98 pounds for the 2010-11 hunting season, which is lower than the average for the 2009-10 season (103 pounds). The Jackson County Waterfowl Areas (122 pounds), Swan Creek & Mallard-Fox Creek (118 pounds), Geneva State Forest (114 pounds), and Black Warrior – Zone B (113 pounds) WMAs reported average yearling male body weights that exceeded 110 pounds. Ten other WMAs reported average yearling male body weights between 100 and 110 pounds. Frank W. & Rob M. Boykin (75 pounds), Oakmulgee (84 pounds), Fred T. Stimpson (86 pounds), Choccolocco (87 pounds), Perdido River (88 pounds), Mulberry Fork (91 pounds), Scotch (91 pounds), Black Warrior – Zone A (95 pounds), and Blue Spring (97 pounds) WMAs had average yearling male body weights less than 100 pounds.

Antler Development:

Antler development (i.e., number of antler points, antler base circumference, main antler beam length, and inside antler spread) for all age classes of bucks was very good on some areas, such as Barbour, Black Warrior – Zones A & B, Coosa, Freedom Hills, Geneva State Forest, Hollins, Lauderdale, Sam R. Murphy, Scotch, William R. Ireland, Sr.-Cahaba River, and Wolf Creek, but remains poor on others (Tables XII and XIII). In most situations, a high percentage of spikes in the yearling age class and a significant occurrence of spikes in the older age classes are a reflection of poor habitat conditions and/or an overcrowded population. The heavy harvest of yearling bucks on some WMAs prevents significant numbers of bucks from reaching the older age classes. This alone continues to limit the harvest of bucks 2-½ years old and older on these WMAs. Corrections to both nutritional deficiencies and buck age structure are necessary in order to bring about improvements in the quality of bucks harvested. However, on areas with poor soil fertility and/or habitat quality, reducing competition for food by reducing deer populations may require the removal of more deer than may be acceptable to many WMA hunters. On very poor quality sites, even a significant reduction in deer numbers may not

produce improvements in deer quality. For this reason, some areas may not be suited for this type of management.

Seven WMAs were under quality deer management (QDM) guidelines for the 2010-11 hunting season. These included Barbour (12 seasons), Black Warrior – Zone B (4 seasons), Freedom Hills (9 seasons), Geneva State Forest (11 seasons), Lauderdale (9 seasons), Lowndes (8 seasons), and Riverton (5 years; no harvest data collection) WMAs. Bucks must have at least 4-points on one antler to be legal for harvest on Black Warrior – Zone B. Bucks must have at least 3-points on one antler to be legal for harvest on the other five areas. Hunters also have more opportunity to kill antlerless deer on gun deer hunts on these WMAs than is available on most other WMAs. All six WMAs managed using QDM guidelines where harvest data are collected have shown improvements in the age structure of the antlered buck harvest since initiation of the QDM programs, with Barbour, Freedom Hills, Geneva State Forest, Lauderdale, and Lowndes WMAs showing the most improvement. This was the primary reason for implementing the antler restrictions on these areas. Prior to the implementation of the antler restrictions, 1-½ year olds were the largest single age class in the annual buck harvest on all of the current QDM areas. For the 2010-11 hunting season, the overwhelming majority of the reported antlered buck harvest on the areas with harvest data was comprised of 2-½ years old and older deer (Barbour 85%, Black Warrior – Zone B 83%, Freedom Hills 87%, Geneva State Forest 59%, Lauderdale 82%). The current management strategies on all seven areas also should produce a higher percentage of adult bucks (2-½ years old and older) in the population, as well as a more balanced adult sex ratio, more intense rutting behavior, and many other traits characteristic of a healthy, balanced deer herd managed under QDM guidelines. Biologists on these areas will continue to collect biological data, as well as public opinion data, to monitor the status of the deer herd and the hunters using these WMAs. These data are used to evaluate the effectiveness of current management practices used on the areas and aid biologists in making decisions to help achieve their long-term management objectives. As the public's demand for more WMAs managed for better quality deer becomes stronger, the Division of Wildlife and Freshwater Fisheries may decide to initiate QDM programs on other public hunting areas in the future. The majority of Alabama's WMAs will continue to be managed for maximum opportunity for buck harvest until that time.

Physically Disabled Hunting Areas:

Alabama's Physically Disabled Hunting Trail is a network of public and private recreational sites throughout the state providing accessible deer hunting opportunities for individuals with physical disabilities. The trail has been developed by the Division of Wildlife and Freshwater Fisheries of the Department of Conservation and Natural Resources in cooperation with a broad range of sponsors. The seventeen PDHAs open for deer hunting by physically disabled hunters during the 2010-11 hunting season provided 948 man-days of deer hunting opportunity, which was more than the 2009-10 hunting season (846 man-days). Hunters killed 106 deer (53 bucks and 53 does) on these areas. Hunters killed one deer for every 8.9 man-days of hunting effort expended, which was much better than last year's success rate of 11.4 man-days of hunting effort per deer killed. The number of man-days of hunting effort expended, number of deer killed, and hunter success rates are summarized in Table XV.

Remarks:

Wildlife management areas provide a significant portion of the deer hunting opportunity in Alabama. This year a 43.9% sample of the total deer harvest on WMAs was used in Tables XI, XII, and XIII. Project cooperators entered check station data on age, sex, weight, and antler development on bucks harvested from WMAs on computer and submitted a copy of these data to the project leader for analysis. Table XIV represents the number of male and female deer by age class used in the 43.9% sample collected from the various management areas. WMA totals, District totals, Statewide totals, and individual hunt results are listed in Appendices I, II, and III. Efforts to improve the accuracy of the tables and to expand our survey will continue when necessary to better manage the resource.

This study was a contribution of the Alabama Division of Wildlife and Freshwater Fisheries supported in part by funding from the Federal Aid in Wildlife Restoration Program, Project W-35, Study 2.
