Annual Report, 2006-2007

Job II-A: Kill Studies of Deer on Alabama Wildlife Management Areas

Study Leader: Christopher W. Cook

Objective: To measure, record, and evaluate the deer harvest on Alabama Wildlife Management Areas.

Procedures: Project personnel recorded hunter participation and success on each of the 35 wildlife management areas (WMAs), two wildlife refuges and 16 physically disabled hunting areas (DHAs) having deer hunting during the 2006-07 season. Deer were examined and records were made of their sex, age, weight, and antler development when possible. Portions of this information were compiled and computed by project cooperators and submitted to the project leader for further analysis.

Discussion:

Hunter Participation and Success:

The number of deer killed on each WMA, the hunting method, and the man-days of participation are compared in Table I. The figures in Tables I through X are considered estimates since season permits are issued on many of the areas. Hunter participation and success may vary due to weather, date of hunt, and length of the season. To better understand overall trends, Table II and Tables V through VIII compare this past season's participation and success with an average of prior years, as well as last year.

Participation in stalk hunts increased 3,806 man-days from last year's totals. Fourteen of the 29 WMAs offering stalk hunts had decreases in hunter man-days for those hunts. Hunter success improved, dropping from 18 man-days per deer killed in 2005-06 to 17 man-days per deer killed in 2006-07. This success rate was better than the average of 23 man-days per deer killed for the period of 2000-05 (Table II).

Nineteen WMAs scheduled either-sex deer hunts for youth hunters during the 2006-07 hunting season. Each hunter participating on one of these special hunts had to be less than 16 years of age and had to be accompanied by a non-hunting, licensed adult 25 years of age or older. Total participation on these hunts decreased from last year's total of 906 hunters to 819 hunters for 2006-07. The decrease likely resulted from the opportunities presented by the initiation of an early statewide youth deer hunting day for private land and open permit-public land in Alabama on the Saturday and Sunday preceding opening day of the general gun deer season. In the past, the WMAs were the only areas in Alabama with special early youth deer hunts. Additional hunting opportunities on other lands likely resulted in less hunter participation during youth deer hunts on WMAs. The number of deer killed on these hunts decreased from 79 in 2005-06 to 44 for 2006-07. These totals (hunters and deer killed) are included in the stalk hunt totals in the following tables. The numbers for these hunts also are listed in Table III. The primary purpose of the youth hunts is to acquaint young hunters with deer hunting. These hunts will continue on WMAs where there is sufficient interest.

Nineteen WMAs offered a total of 188 days of hunter's choice hunts (Table IV). One hundred eighty-seven days of the 188 days of hunter's choice hunts were stalk hunt days. The remaining day was a dog hunt day. Most (187 of 188) of the hunter's choice hunts for the 2006-07 hunting season offered 100% either-sex opportunities. The chance to kill antlerless deer on the hunter's choice hunts greatly influences the hunter participation, number of deer killed, and hunter success levels shown in

the stalk hunt totals (Tables I and II). Participation in hunter's choice stalk hunts was 54% of the total stalk hunt hunting effort and represented 69% of the total stalk hunt deer kill. The one day hunter's choice dog hunt was 8% of the total dog hunt hunting effort and represented 20% of the total dog hunt deer kill. The hunter success rate for all hunter's choice hunts was one deer per 13.4 man-days of hunter effort, which was nearly two times higher than the success rate for the bucks only stalk hunts (one deer per 25.5 man-days of effort). Fifty-six percent of the deer killed on the hunter's choice hunts were antlerless deer.

Participation in managed dog hunts increased slightly from the 2005-06 totals (Table V). Hunter success remained the same as last year at 23 man-days of hunting per deer killed. Dog hunting participation was 5% of the total deer hunting effort on WMAs during the 2006-07 season and accounted for 4% of the total deer kill.

Archery hunting participation decreased by nearly 2,000 man-days from the previous year's total for the second season in a row. Hunter success improved significantly from 20 man-days per deer killed during the 2005-06 hunting season to 15 man-days per deer killed during the 2006-07 season (Table VI). The success rate for 2006-07 was higher than the 2000-05 average of 29 man-days per deer killed. Archery hunting continues to provide a large portion of the hunting recreation on WMAs, representing 27% of the total deer hunting effort and 30% of the total deer kill.

Participation in primitive weapons (PW) hunts during the 2006-07 season (4,621 man-days) increased slightly when compared to the 2005-06 season (4,423 man-days). The success rate on PW hunts decreased, going from 16 man-days per deer killed during the 2005-06 season to 17 man-days per deer killed for 2006-07 (Table VII). Participation on PW hunts represented 5% of the total deer hunting effort and 5% of the total deer killed on WMAs during the 2006-07 season.

The total hunting effort, as shown in Table VIII, showed an increase of just under 2,300 man-days when compared to the 2005-06 totals. This year's hunting effort was just over 5,000 man-days below the average of the previous five years (2000-01 through 2004-05). This year's hunter success ratio of one deer killed per 17 man-days of effort for all deer hunts was higher than last year's (19 man-days per deer killed) and the average for the previous five years (24 man-days per deer killed).

Hunting Pressure and Kill Per Square Mile:

Total man-days of deer hunting per square mile, as shown in Table IX, was highest on St. Clair, Riverton, Lowndes, Demopolis, Barbour, Little River, Blue Spring, and West Jefferson WMAs, respectively. Total man-days of hunting per square mile was lowest on Seven-Mile Island (archery only), the Jackson County Waterfowl Areas (archery only), William L. Holland & Mobile-Tensaw Delta, Black Warrior, Escambia Creek, Swan Creek & Mallard Fox Creek (archery only), Choccolocco, and Upper Delta WMAs, respectively. Stalk hunting made up the largest portion of total use per square mile on most areas (25 of 37). Archery hunts made up the largest portion of use per square mile on the Jackson County Waterfowl Areas (archery only), Riverton, Swan Creek & Mallard-Fox Creek (archery only), Seven-Mile Island (archery only), and Upper Delta WMAs. Dog hunts made up the largest portion of use on Frank W. & Rob M. Boykin and Scotch WMAs.

Most areas of Alabama can support a balanced deer kill (bucks and does) of ten or more deer per square mile annually, depending on habitat quality. Four WMAs achieved this level during the 2006-07 hunting season, mainly because of the limited opportunity to kill antlerless deer with firearms and low hunting pressure on most WMAs (Table X). St. Clair had the highest estimated number of deer killed per square mile (14.34), followed by Lowndes (13.93), Blue Spring (12.54), Sam R. Murphy (10.37), Barbour (9.36), Lauderdale (8.87), Riverton (8.50), Demopolis

(8.47), and Mulberry Fork (7.56). William L. Holland & Mobile-Tensaw Delta had the lowest estimated number of deer killed per square mile (0.42), followed by the Jackson County Waterfowl Areas (1.37), Black Warrior (1.65), Escambia Creek (2.08), Upper Delta (2.22), Seven-Mile Island (2.67), Cahaba River (2.89), and Swan Creek & Mallard-Fox Creek (3.25).

Weights and Condition of Deer:

Average weights of deer within specific age classes are one of the best indicators of overall herd condition (Table XI). An average live weight under 95 pounds for 1-½ years old males (i.e., yearlings) can be an indicator of poor physical condition caused by insufficient nutrition, either from poor habitat, heavy competition for food from other deer, or both. Where the yearling males have an average body weight of 95 to 105 pounds on areas with good soils, there should be concern the deer population exceeds the capacity of the land to support the herd in good condition. The deer population should be reduced to a more healthy level in any situation where competition for food is the cause of low body weights in deer. Areas in Alabama with yearling males averaging above 110 pounds live weight usually are not carrying an excess of deer and efforts should be made to keep those populations at current levels. Average yearling male body weights among all WMAs averaged 101 pounds for the 2006-07 hunting season. This is slightly higher than the average for the 2005-06 season (99 pounds). Swan Creek & Mallard-Fox Creek (130 pounds), Jackson County Waterfowl Areas (128 pounds), Wolf Creek (118 pounds), Black Warrior (112 pounds), and Barbour (112 pounds) were the only WMAs with average yearling male body weights that exceeded 110 pounds. Eight other WMAs reported average yearling male body weights between 100 and 110 pounds. Lowndes (78 pounds), Frank W. & Rob M. Boykin (87 pounds), and Oakmulgee (88 pounds) had average yearling male body weights less than 90 pounds.

Antler Development:

Antler development (number of points, main beam length, and inside spread) for all age classes of bucks was very good on some areas, such as Barbour, Black Warrior, Cahaba River, Coosa, Freedom Hills, Lauderdale, Mulberry Fork, Sam R. Murphy, Swan Creek & Mallard-Fox Creek, and Wolf Creek, but remains poor on others (Tables XII and XIII). In most situations, a high percentage of spikes in the yearling age class and a significant occurrence of spikes in the older age classes are a reflection of poor habitat conditions and/or an overcrowded population. The heavy harvest of yearling bucks on some WMAs prevents significant numbers of bucks from reaching the older age classes. This alone continues to limit the harvest of bucks 2-½ years old and older on these WMAs. Corrections to both nutritional deficiencies and buck age structure are necessary in order to bring about improvements in the quality of bucks harvested. However, on areas with poor soil fertility and/or habitat quality, reducing competition for food by reducing deer populations may require the removal of more deer than may be acceptable to many WMA hunters. On very poor quality sites, even a significant reduction in deer numbers may not produce improvements in deer quality. For this reason, some areas may not be suited for this type of management.

Five WMAs were under quality deer management (QDM) guidelines for the 2006-07 hunting season. These included Barbour, Covington, Freedom Hills, Lauderdale, and Lowndes WMAs. On all five of these WMAs, bucks must have at least 3-points on one antler to be legal for harvest. Hunters also have more opportunity to kill antlerless deer on gun deer hunts on these WMAs than is available on most other WMA's. All five WMAs have shown considerable improvements in the age structure of the antlered buck harvest since initiation of the QDM programs. This was the primary reason for implementing the antler restriction. Prior to the implementation of the antler restrictions, 1-½ year olds were the largest single age class in the annual buck harvest on all of the current QDM areas. For the 2006-07

hunting season, the overwhelming majority of the reported antlered buck harvest on these five areas was comprised of 2-½ years old and older deer (Barbour 89%, Covington 83%, Freedom Hills 79%, Lauderdale 90%, Lowndes 98%). The current management strategies on all five areas also continues to produce a higher percentage of adult bucks (2-½ years old and older) in the population, as well as a more balanced adult sex ratio, more intense rutting behavior, and many other traits characteristic of a healthy, balanced deer herd managed under QDM. Biologists on these areas continue to collect biological data, as well as public opinion data, to monitor the status of the deer herd and the hunters using these five WMAs. These data are used to evaluate the effectiveness of current management practices used on the areas and aid biologists in making decisions to help achieve their long-term management objectives. As the public's demand for more WMAs managed for better quality deer becomes stronger, the Division of Wildlife and Freshwater Fisheries may decide to initiate QDM programs on other public hunting areas in the future. The majority of Alabama's WMAs will continue to be managed for maximum opportunity for buck harvest until that time.

Physically Disabled Hunting Areas:

Alabama's Physically Disabled Hunting Trail is a network of public and private recreational sites throughout the state providing accessible deer hunting opportunities for individuals with physical disabilities. The trail has been developed by the Division of Wildlife and Freshwater Fisheries of the Department of Conservation and Natural Resources in cooperation with a broad range of sponsors. The sixteen areas open for deer hunting by physically disabled hunters during the 2006-07 hunting season provided 995 man-days of deer hunting opportunity. Hunters killed 113 deer (65 bucks and 48 does) on these areas. Hunters killed one deer for every 8.8 man-days of hunting effort expended. The number of man-days of hunting effort expended, number of deer killed, and hunter success rates are summarized in Table XV.

Remarks:

Wildlife management areas provide a significant proportion of the deer hunting opportunity in Alabama. This year a 51% sample of the total deer harvest on WMAs was used in Tables XI, XII, and XIII. Project cooperators entered check station data on age, sex, weight, and antler development on bucks harvested from WMAs on computer and submitted a copy of these data to the project leader for analysis. Table XIV represents the number of male and female deer by age class used in the 51% sample collected from the various management areas. WMA totals, District totals, Statewide totals, and individual hunt results are listed in Appendices I, II, and III. Efforts to improve the accuracy of the tables and to expand our survey will continue when necessary to better manage the resource.

This study was a contribution of the Alabama Division of Wildlife and Freshwater Fisheries supported in part by funding from the Federal Aid in Wildlife Restoration Program, Project W-35, Study 2.
